

Leak Detection Pro Kit

Get even more out of your leak detector.

A kit built to maximize capability and performance.

Designed to help you leak check like a pro, this kit comes with a needle probe, rubber I-Tip, brush I-Tip XL, spare filters and extra rubber refills. Use the needle probe to diagnose problems in unique applications like VRF and other systems that have hard-to-access refrigerant lines, and even check for leaks on insulated lines without removing insulation. For windy or drafty conditions, attach I-Tip or I-Tip XL to the end of the probe to contain the refrigerant sample and find leaks in any environment.

Leak Detection Pro Kit 724-712-G1

SPECIFICATIONS

Includes

Needle probe extension
I-Tip
I-Tip XL
Rubber refills
