功能

- B-Version for enhanced test on customer site

- DPDS is a test program that runs under Windows for almost all current INFICON active measuring devices as SKY, Edge, CDG025D, strips, BPG400, BPG402, BAG402, BCG450, PSG55x, PCG55x, MAG5xx, MPG5xx.

- DPDS is user-friendly and enables the customer to test and parameterize the INFICON sensor independently and without programming knowledge and supports him with pressure measurements.

- Target system requirements:

  The current version of LabView 2017 is specified for:

  Operating system: Windows 10 / 8.1 / 7 SP1, Windows Server 2012 R2, Windows Server 2008 R2

  Processor: 32 Bit: At least Pentium 4M / Celeron 866 MHz (or equivalent); 64 bit: At least Pentium 4 G1 (or equivalent)

  For LabVIEW and the LabVIEW runtime engine, a Pentium 4M / G1 (or newer) processor is required that can execute SSE2 instructions.

  RAM: 256 MB
  Screen resolution: 1024 x 768 pixels
  Storage space: 620 MB

- Installation on the target system:

  Windows installation files are generated with the "Application Builder" belonging to LabView 2017. Install these installation files on the target system ...

  ... a LabView Runtime Engine

  ... the sensor test program as an executable .EXE file

  ... all other files necessary for executing the test program
